

Department of Computer Science and Engineering - 2

ENGINEERING CAPSTONE PROJECT
Guide Evaluation Report

Capstone Project–I & Capstone Project–II

Academic Year: 2026–2027

A continuous monitoring and assessment record for the senior design capstone project series.

PREFACE

This diary is an official departmental record for monitoring the complete lifecycle of the Engineering Capstone Project. It documents weekly mentor-student interactions, prototype development, software and hardware integration, testing, review observations, innovation, research publication, patent activities, and final project evaluation.

OBJECTIVES & PROGRAMME OUTCOMES

- Think critically and solve challenging, open-ended problems by designing innovative software solutions integrated with hardware components.
- Apply Computer Science and specialization domain knowledge (AI, Robotics, Cloud, Security, Edge) to real-world problems.
- Design and implement software algorithms, data pipelines, and hardware interfaces using modern tools and techniques.
- Demonstrate effective teamwork, leadership, and project management abilities.
- Adhere to professional, ethical, and societal standards in software and hardware integration.

PROJECT GUIDELINES

Student Responsibilities:

- Meet your assigned guide every week without fail.
- Maintain this weekly project diary up to date.
- Bring the physical prototype or live codebase during reviews.
- Maintain an active GitHub repository for version control.
- Ensure data originality and strictly avoid plagiarism.
- Log all guide suggestions and execute the action plan timely.

Guide Responsibilities:

- Conduct rigid weekly review sessions for the batch.
- Verify software code commits and hardware prototype progress.
- Provide necessary technical references and design corrections.
- Closely monitor research paper drafting and patent milestones.
- Authenticate weekly logs with signatures and formal remarks.

STUDENT & PROJECT INFORMATION

Project Title	
Project Domain	
Student Name(s) with Reg No	1. 2. 3. 4. 5.
Batch / Section - (P/S)	
Guide Name with Designation	
Guide Employee ID	
Project Type	Hardware / Software
Hardware Components Used	
Industry / Societal Problem	
Expected Deliverables	

Guide Signature: _____ **Student Signatures:** _____

EVALUATION SCHEME

The Capstone Project is evaluated out of 100 marks in total, divided into In-Semester Continuous Assessment (60 Marks) and End- Semester Summative Evaluation (40 Marks). The structure is specifically aligned with CSE Specializations (AI, Cloud, Cybersecurity, Edge) and Hardware/Software System Integration.

Evaluation Component	Project Review 1	Project Review 2	Project Review 3	Prototype Demonstration	Final External Review	Total
Continuous Evaluation (Weekly lab sessions & progress logs)	5	5	5	—	—	15
Guide Evaluation (Code commits, hardware interfacing & logs)	5	5	5	—	Included below*	15
Panel / Project Review (Domain presentation & architectural defense)	7	7	7	—	—	21
Prototype Demonstration (Live hardware/software setup & dashboard)	—	—	—	9	—	9
Final End-Semester External Review (External viva-voce & final system defense)	—	—	—	—	40	40
Total Marks	17	17	17	9	40	100

SCALING FORMULAS and MAPPING GUIDELINES

- Continuous Evaluation (per review): (Average of weekly session scores ÷ 50) × 5
- Guide Evaluation (per review): (Guide's Individual Sheet score ÷ 50) × 5
- Panel / Project Review (per review): (Panel Rubric score ÷ 50) × 7
- Prototype Demonstration: (Panel Prototype Rubric score ÷ 50) × 9
- Final External Review Contribution: (End-Semester External Rubric score ÷ 100) × 40

***Note**: The Final External Review is evaluated out of 100 marks using its specialized rubric mapped to Computer Science track depth, algorithm execution, live hardware interfacing, testing accuracy, and presentation. This includes a 20-mark Guide Evaluation component, scaled down to contribute 40 marks to the overall semester grade.

REVIEW 1 — PROJECT INITIATION & PLANNING

Key Focus Areas:

- Clear formulation of the industry/societal problem statement and SMART objectives.
- In-depth literature survey identifying technological gaps in existing solutions.
- High-level system block architecture showing software modules and hardware integration flow.
- Selection and feasibility justification of hardware devices, software stack, frameworks, and APIs.

What Students Should Present:

- Presentation Deck (Slides): Problem definition, literature comparison matrix, proposed solution architecture, and execution roadmap.
- Deliverables: Initial SRS outline, block diagram/data flow chart, component specification sheet (hardware & software tools list), and team task distribution matrix.

Panel Evaluation Rubric — Review 1 (50 Marks)

S. No	Criterion	Max Marks
1	Problem Statement & Objectives	10
2	Background & Literature Review	10
3	Methodology & System Architecture	10
4	Hardware & Software Requirement Sizing	10
5	Presentation & Communication	10
	Total Marks	**50**

Guide's Individual Evaluation Sheet — Review 1

S. No	Criterion	Max Marks
1	Problem Statement & Objectives	10
2	Background & Literature Review	10
3	Methodology & System Architecture	10
4	Hardware & Software Requirement Sizing	10
5	Presentation & Communication	10
	Total Marks	**50**

Guide Signature: _____ ***Date:*** _____

REVIEW 2 — SYSTEM DESIGN & PARTIAL IMPLEMENTATION

Key Focus Areas:

- Detailed software modeling (UML diagrams, ER diagrams, data flow) and hardware circuit/block schematics.
- Implementation of core algorithms, ML models, or software logic.
- Initial hardware-software communication (e.g., sensor data reading, serial communication, API connection).
- Version control practices, coding standards, and collaborative tools.

What Students Should Present:

- Live Module Demo: Working partial software code/dashboard and connected hardware module responding to live inputs.
- Deliverables: Complete SRS document, UML/Circuit schematics, code repository link (GitHub commit log), and test runs of individual modules.

Panel Evaluation Rubric — Review 2 (50 Marks)

S. No	Criterion	Max Marks
1	System Requirements & SRS	10
2	System Design & Architecture	10
3	Algorithm & Model Implementation	10
4	Hardware Interfacing & Partial Prototype	10
5	Use of Modern Tools & Teamwork	10
	Total Marks	**50**

Guide's Individual Evaluation Sheet — Review 2

S. No	Criterion	Max Marks
1	System Requirements & SRS	10
2	System Design & Architecture	10
3	Algorithm & Model Implementation	10
4	Hardware Interfacing & Partial Prototype	10
5	Use of Modern Tools & Teamwork	10
Total Marks		**50**

Guide Signature: _____ ***Date:*** _____

REVIEW 3 — FINAL IMPLEMENTATION AND EVALUATION

Key Focus Areas:

- Full integration of software application/backend with connected hardware devices.
- System performance testing (accuracy, latency, throughput, execution speed, and stability).
- Practical applicability and impact in the chosen specialization domain.
- Critical evaluation of results, edge-case failures, and identification of future enhancements.

What Students Should Present:

- Full End-to-End System Demo: Complete end-to-end working software-hardware system handling real-world scenario inputs.
- Deliverables: Comprehensive testing report with graphs/tables, draft of the final project report, research paper draft (if applicable), and user manual**.**

Panel Evaluation Rubric — Review 3 (50 Marks)

S. No	Criterion	Max Marks
1	Completed System Functionality	20
2	Testing & Performance Evaluation	10
3	Real-world Application & Domain Impact	10
4	Reflection, Learning & Future Scope	10
	Total Marks	**50**

Guide's Individual Evaluation Sheet — Review 3

S. No	Criterion	Max Marks
1	Completed System Functionality	20
2	Testing & Performance Evaluation	10
3	Real-world Application & Domain Impact	10
4	Reflection, Learning & Future Scope	10
	Total Marks	**50**

Guide Signature: _____ ***Date:*** _____

PROTOTYPE DEMONSTRATION – LIVE SYSTEM EVALUATION

Key Focus Areas:

- Live, hands-on execution of the fully assembled software application and hardware setup.
- User interface clarity, dashboard usability, and real-time response speed.
- Robustness of software-hardware communication under live testing conditions.
- Verification of innovation and practical utility in front of evaluators.

What Students Should Present:

- Live Physical Demonstration: Live execution of the physical setup with real-time software response, data visualization, and user interaction.
- Deliverables: Live system demonstration, experimental output logs, poster/architecture banner, and final project diary for evaluation signing.

Panel Evaluation Rubric — Prototype Demonstration (50 Marks)

S. No	Criterion	Max Marks
1	Prototype Functionality & Live Integration	20
2	Innovation & Technical Implementation	10
3	User Interface & Practical Utility	10
4	Testing & Results Validation	10
	Total Marks	**50**

Guide's Individual Evaluation Sheet — Prototype Demonstration

S. No	Criterion	Max Marks
1	Prototype Functionality & Live Integration	20
2	Innovation & Technical Implementation	10
3	User Interface & Practical Utility	10
4	Testing & Results Validation	10
	Total Marks	**50**

Guide Signature: _____ ***Date:*** _____

FINAL END SEMESTER EXTERNAL REVIEW

Pre-Review Preparations

- **Guide Presence Mandatory:** Internal project guide must be present.
- **Document Submission (2–3 days prior):** Signed final report, slides, user manual, code repository/demo link.
- **Display Setup:** Functional laptops and live software/hardware demo setup.

Review Process & Post-Review

- **Time Allocation:** 20–25 minutes total (10–15 min presentation + 5–10 min Q&A/demo).
- **Coverage:** Problem, objectives, methodology, architecture, live demo, outcomes, and future scope.
- **Responsibilities:** Examiner marks recorded and signed by panel; final signed hardbound reports submitted for archiving.

Evaluation Rubric (Max Marks: 100)

S. No	Criterion	Max Marks
1	Problem Definition & Objectives	10
2	Literature Review & Technical Background	10
3	System Design & Architecture	10
4	Implementation & Functionality	10
5	Hardware Interfacing & Edge Integration	10
6	Innovation / Advanced Tools Usage	10
7	Team Collaboration & Management	5
8	Report Quality & Documentation	5
9	Viva-Voce & Presentation Skills	10
10	Guide Evaluation	20
Total Marks		**100**

External Examiner Signature: _____ **Guide Signature & Date:** _____

SEMESTER ROADMAPS

Capstone Project-I Roadmap

Week	Milestone Target
Week 1	Problem Identification
Week 2	Requirement Analysis
Week 3	System Design
Week 4	Hardware/Software Component Selection
Week 5	Procurement of Modules
Week 6	Circuit / Architecture Design
Week 7	Prototype Development Stage 1
Week 8	Coding and Firmware Implementation
Week 9	Module Integration
Week 10	System Testing
Week 11	Debugging & Refinement
Week 12	Prototype Demonstration
Week 13	Final Review Preparation

Capstone Project-II Roadmap

Week	Milestone Target
Week 1	Action Taken Report & Improvements
Week 2	Prototype Enhancement
Week 3	Performance Testing & Parameters
Week 4	Reliability & Stress Testing
Week 5	System Optimization
Week 6	Experimental Validation
Week 7	Research Paper Drafting
Week 8	Paper Submission to Journal/Conf.
Week 9	Patent Prior-Art Search
Week 10	Patent Drafting
Week 11	Patent Filing Process
Week 12	Final Deployment & Demonstration
Week 13	Documentation & Viva Voce
